

Germi-Stat

Anti-microbial Skin Cleanser

Fast acting, persistent 2% or 4%
Chlorhexidine Gluconate skin cleanser.

Germi-Stat is a clear, non-staining 15 second antimicrobial skin cleanser formulated for use before and after patient contact, and for pre-surgical handwashing. Germi-Stat has a broad spectrum effectiveness even in the presence of organic material.

Germi-Stat offers fast-acting, long lasting antimicrobial activity and is critical for reducing the risk of transmitting organisms to and from patients and health care personnel.

Germi-Stat is gentle enough to use for every handwash and contains emollients to leave skin soft and prevent drying.

- Fast-acting, long lasting formula
- Broad spectrum antimicrobial cleanser
- Viscous formulation reduces runoff
- Added emollients soften skin
- Safe and gentle enough for regular use
- High-level residual action

*A gentle yet effective,
antiseptic skin cleanser!*

PRODUCT PROFILE

GERMI-STAT 2% & 4%

2% - DIN 01930079 4% - DIN 01930087

Product Antimicrobial Skin Cleanser with either 2 or 4% Chlorhexidine Gluconate

Description **GERMI-STAT** is a 15 second antimicrobial skin cleanser that is fast acting and persistent against a broad spectrum of gram-positive and gram-negative bacteria, yeasts and molds. **GERMI-STAT** provides a versatile, easy to use and effective skin cleansing system.

Function **GERMI-STAT** is indicated as a routine skin cleanser that is used before and after patient contact to remove microorganisms in order to prevent cross-contamination between patients and health care personnel.

Packaging **GERMI-STAT** liquid is available in 340 mL pumpette or 4 L refill

Features

Benefits

Proven Superior Effectiveness

GERMI-STAT's active ingredient, chlorhexidine gluconate has been demonstrated to have a high, fast and persistent kill rate against a broad spectrum of gram-positive and gram-negative bacteria, yeasts, mold and other pathogens including *Pseudomonas aeruginosa* and *Staphylococcus aureus*. Unlike parachlorom Etxylenol (PCMX), triclosan and other low-action active ingredients, chlorhexidine gluconate provides both rapidly effective, broad spectrum contact killing and high-level persistence. Safer and more effective than hexachlorophene, chlorexidene gluconate is significantly more persistent than the iodophors. This combination of fast, broad -spectrum action and persistent effect makes **GERMI-STAT** preferable as a health care personnel hand wash and surgical scrub.

15 Second Hand Wash

Complete broad-spectrum antimicrobial action in 15 seconds, **GERMI-STAT** exhibits a rapid onset of bactericidal activity that is especially important to the office practitioner and staff where time between each patient contact is in short supply. Acceptance of a product by the Health Protection Branch (DIN), provides the practitioner with the assurance that the accepted provide has shown adequate evidence for safety and effectiveness.

Persistent Anti-Microbial Activity

Chlorhexidine gluconate has proven to be a persistent anti-microbial agent under the many circumstances experienced in healthcare facilities. This broad-spectrum persistence is maintained for up to six hours after regrowth, a characteristic that is a significant improvement over scrubbing with high-level residual action that inhibits microbial all other antiseptic active ingredient skin cleaners. Chlorhexidine gluconate has been shown to be highly effective even in the presence of organic material like saliva, serum, pus and blood.

Proven Safe Formulation

The safety of chlorhexidine gluconate based skin cleansers has been supported by over thirty years of clinical testing and experience throughout the world. When used as a health care personnel hand wash and as a surgical scrub, there is no reported evidence of toxicity and repeated usage does not create significant irritation or sensitization problems.
