Antigingivitis | Antimicrobial Oral Rinse

Prescription oral rinse specifically formulated to kill bacteria associated with gum disease.

0.12% Chlorhexidine Gluconate Oral Rinse with 10% Ethanol

DIN 02209055

It Works	ORO-CLENS is indicated for use as part of a professional program for the treatment of moderate to severe gingivitis, and for the management of associated gingival bleeding and inflammation between dental visits.
	Rinsing with ORO-CLENS inhibits the build up and maturation of plaque by reducing certain microbes regarded as gingival pathogens thereby reducing gingivitis.
It Lasts	Binds to mucosal tissue (hydroxyapatite, pellicle, salivary glycoprotein and mucous membranes) to achieve residual antimicrobial activity for several hours. Exerts bacteriostatic effect as the CHX is gradually released from retention sites. Residual retention for 6 – 12 hours.
It's Safe	ORO-CLENS is an ideal pre-procedural rinse. Use of a chlorhexidine mouthwash before patient treatment has been shown to significantly reduce the bacterial count in the air of the operator. Reduced splatter and aerosols minimizes the risk of infection to dental personnel and other people in the dental office. ¹
	Studies conducted demonstrate that any ingested chlorhexidine gluconate is poorly absorbed from the gastrointestinal tract. Excess is excreted through body wastes, ensuring patient safety.
It's Convenient	Pleasant mint flavour ensures patient compliance.
	ORO-CLENS compliments crown and bridge work by minimizing repeated retraction and procedures as well as reducing plaque that can complicate crown settings.
	ORO-CLENS is packaged in 500 mL; eco and space-friendly 4 L refills. Home kit available for easy patient use; includes 4 L refill, 16 x 227 mL empty bottles, labels and caps.

* ORO-CLENS is ideal also in the following conditions:

- For immuno-compromised patients
- Plaque reduction
- Reduction of post-surgical inflammation
- Reduction of high streptococcus mutans level
- Reduction of periodontal organisms
- Sub-gingival and supra-gingival irrigation
- Reduction of dry socket resulting from third molar surgery

* Dispensing ORO-CLENS is beneficial:

- Treatment can begin immediately
- Saves patient time and money at the pharmacy
- Ensures patients get your specific prescribed product

CHX (Chlorhexidine Gluconate) rinses are often used as a benchmark control, meaning a product already in use and/or evaluated thus providing information regarding another agent's relative activity. CHX rinses are used similarly as a positive control, meaning they are accepted as effective, the most effective, or the "gold standard."²

* TRY these related products:

Oro X Antibacterial Mouthwash

- Gentle, alcohol free daily mouthwash
- Dentists can use as a base to formulate custom rinses
- Non-staining

ALCOHOL FREE alternative

Dental Dams Latex/Non-latex

- During many dental procedures, the use of a rubber dam will eliminate virtually all contamination arising from saliva or blood³

Reduces risk of air borne contamination

Pixie Pearls Calcium Carbonate Prophy Powder

- Micro-spheres easily and safely remove stains caused by CHX use
- No clogging
- Minimize the damage to enamel
- Sodium and sugar free

Removes CHX stains
