

ZAP

Topical Anesthetic Gel

A fast-acting formula: effective in 30 seconds with a 15 minute duration.

Zap topical anesthetic gel minimizes pain in oral mucosal tissue. Zap directs attention away from the discomfort of needle punctures, deep scaling procedures, prosthetic adjustments, clamp or crown placements, primary dentition extractions and suture removals. Zap can also be

used to reduce the pharyngeal (gag) reflex associated with placing dental materials like impression trays and x-ray films into the oral cavity.

Zap's distinctively clear, one-touch jar dispenses the right amount of gel each time. It's hygienic, minimizes the risk of cross-contamination and reduces waste.

- Received NACD Gold Packaging award for unique sanitary dispensing jar
- Topical anesthesia within 30 seconds
- Topical anesthesia for a minimum of 15 minutes
- Five delicious flavours - with no bitter aftertaste (Strawberry Ice, Cool Mint, Cherry, Pina Colada and Bubblegum)

Zap the pain!
